

BREEDING

GIORDANO POULTRY PLAST

Giordano Poultry Plast® was founded in 1962 and continues to be run by the Giordano family.

Since its origin, it has devoted itself to the poultry sector, specialising in it: from hatching to breeding, all the way down to slaughtering and transport, and it has made its production revolve around a material endowed with countless qualities: plastic.

Equipment supply to animal farming represents the deepest root of the group activity, and the sector in which its longest history has given birth to a wide-ranging and well-structured production and commercial organization worldwide.

The specific expertise in the use of materials has led to the development, especially in recent years, of a significant network of relationships with other leading companies in the sector, operating not only in the breeding field but also in such other fields as slaughtering and transport, for which the Giordano group designs and creates high-tech plastic products and components. A supplementary recognition of skill and reliability.

Thanks to a direct knowledge of the usage profile and of the different technical and practical needs coming from the various sectors within the global poultry industry, the Company attends directly to all production phases. From creation to design, in our R&D department, and final manufacture, the company is always looking for innovative high-performing products and solutions, capable of combining efficiency, cost-effectiveness and durability.

AUTOMATIC LINE

Thanks to its current range of lines, made with recognized and peculiar raw materials (100% made in Italy) and proved reliable functioning, Giordano Poultry Plast® is effectively positioned on the market as supplier of automatic lines and their complementary components.

The possibility of offering turnkey feeding and drinking lines is worthwhile for poultry as well as for turkey and duck farms, confirming the severe decrease in human intervention during the breeding.

The efficient automatic feeders and drinking lines are designed for all species of poultry interest and for every breeding need. They are also easy to assemble and maintain, and allow a significant reduction in time and management costs.

TWIST & MAXI TWIST

Cod. 0308001
TWIST

CHARACTERISTICS

Diameter: 350 mm
Circumference: 1.110 mm
Capacity:
60/70 adult chicken 2,5 kg
Depth: 40 mm
Weight: 0,855 kg
Standard packing:
20 cones per carton
540x540x570 mm
20 pans per carton
710x360x1.010 mm
Shipping capacity:
1.200 pieces per 20' cnt
2.400 pieces per 40' cnt
2.760 pieces per 40' HC

Cod. 0308004
MAXI TWIST

CHARACTERISTICS

Diameter: 375 mm
Circumference: 1.180 mm
Capacity:
60/70 adult chicken 2,5 kg
Depth: 55 mm
Weight: 0,885 kg
Standard packing:
20 cones per carton
400x1.000x800 mm
20 pans per carton
400x1.000x800 mm
Shipping capacity:
1.040 pieces per 20' cnt
2.080 pieces per 40' cnt
2.360 pieces per 40' HC

Cod. 0308103
CAP

Cod. 0308104
FLAT CAP

Twist is the only truly fully automatic feeder worldwide. It is the first poultry feeder consisting of only 3 parts and the only feeder allowing a one-step washing process, without any disassembling or handling. Twist is made to follow the entire cycle growth of the broiler, satisfying ideal bird feeding needs by simply modifying the height of the line, to provide the best results up to the end of the lifecycle. The special inclination towards the inner centre of the plate and the edge design allow a substantial reduction of food leakage during the feeding.

POLYFEEDER

Polyfeeder is the automatic feeder of Giordano Poultry Plast for turkey and web-footed bird breeding. This highly resistant plastic feeder is suitable for all ages of birds realized with decomposable and modular parts, allowing different applications. Its main advantage is that it can be used during the breeding and fattening phases in all situations where it is possible to carefully adjust the feed flux.

DRINKER T-LINE

CHARACTERISTICS

TURKEY/DUCK
water flow cc/min 75

The Drinker T-Line is specifically designed for ducks and turkeys. It provides perfect functionality, optimum performances and is composed by few components. Permanent supply of fresh water permits the animals to live in a healthy environment and to decrease the mortality rate.

The pendulum, which is connected to the nipple and oscillates thanks to the pecking of ducks, minimizes water wasting and permits a correct calibration of water.

SUPER DROP

CHARACTERISTICS

Capacity:
10/12 chickens

The drinking line has a perfect functionality and optimum performance. No waste, no leakage, always dry litter. Permanent supply of fresh water results in healthy environment with less mortality. Different nipples available depending on water flow and the species of farmed birds.

FEEDERS & DRINKER

All poultry farms, wherever they might be and whatever their size, need an adequate administration of food and drinking water.

The Giordano Poultry Plast® drinkers and feeders are designed to ensure a positive economic result in compliance with regulatory requirements and growing expectations of animal welfare, environmental sustainability and monitoring of health and hygiene conditions.

Among the most dynamic areas of its business, Giordano Poultry Plast® has regularly expanded its range of drinking and feeder troughs over time and the species for which the same should be designed and implemented.

All drinkers and feeders in the company's range are easy to assemble and maintain. The whole product range is made to follow the entire cycle growth of the animal, from the chick up to the adult stage, through products designed to satisfy all poultry species.

The materials used to produce our products are adequately tested, and thanks to the use of various additives we protect them from UV rays, colour them, and customize them according to customer requirements.

SLAT

Made with high quality plastic, the slats are resistant to corrosion, have a long life, are easily cleaned and disinfected and, above all, are safe, thus ensuring high-breeding performance levels. They are made with polypropylene, a copolymer UV stabilized that reduces ageing due to solar rays, resistant to high temperature.

The advantage of a slat is that the litter quality is consistently better, because the birds sleep on the slats. This means that a lot of manure is produced on the slats and collected under them and animal welfare is guaranteed.

The special design allows maximum ventilation and this leads to an increase in the number of animals per square meter.
