

Welcome to our first newsletter!

The main purpose of this newsletter is to share our knowledge with you, to help you improve your rendering business for better product quality and yields.

Each newsletter will be themed around a machine or system.

The theme of this newsletter is the disc dryer.

We will cover:

- What is a disc dryer?
- How does it work?
- What kind of raw product is suitable for a disc dryer?
- What are the main benefits of using a disc dryer?

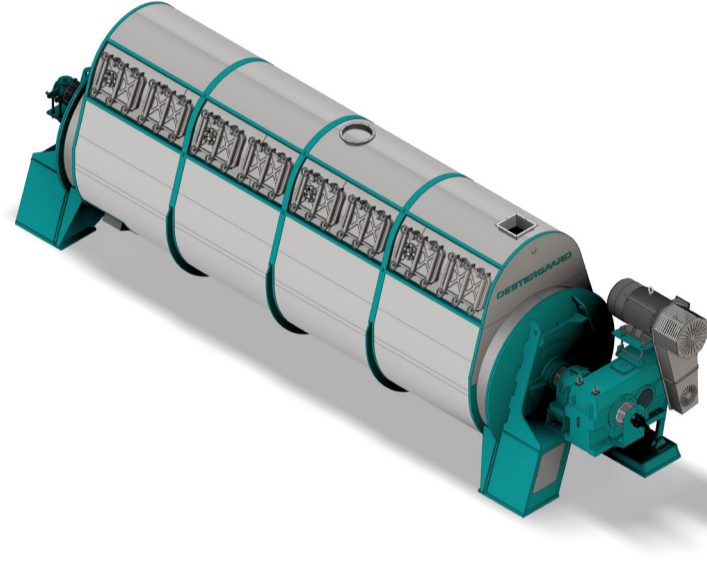

Like what you read? This is an exclusive view of our newsletter. If you want to keep receiving our newsletter in the future, sign up via the button below.

What is a disc dryer?

The main function of a disc dryer is to cook or dry raw products such as meat, fish and poultry. In some cases it can even process sewage sludge.

A disc dryer is normally part of a continuous drying and cooking process.

How does a disc dryer work?

Suitable raw material for a disc dryer

Depending on the brand, a disc dryer can normally process a wide variety of raw products such as:

- Animal by-products
- Fish products
- Coagulated or dewatered blood
- Hydrolysed feathers or hog hair
- Prebroken or crushed fallen stock

Main benefits of using a disc dryer

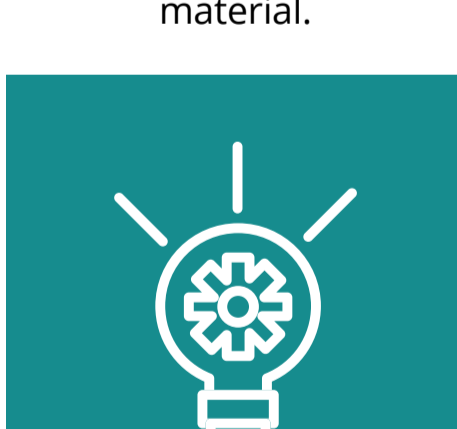

Homogeneous cooking or drying to the required dry matter content.

Controlled retention time inside the disc dryer provides effective drying of different types of raw material.

Highly reliable condensate removal system.

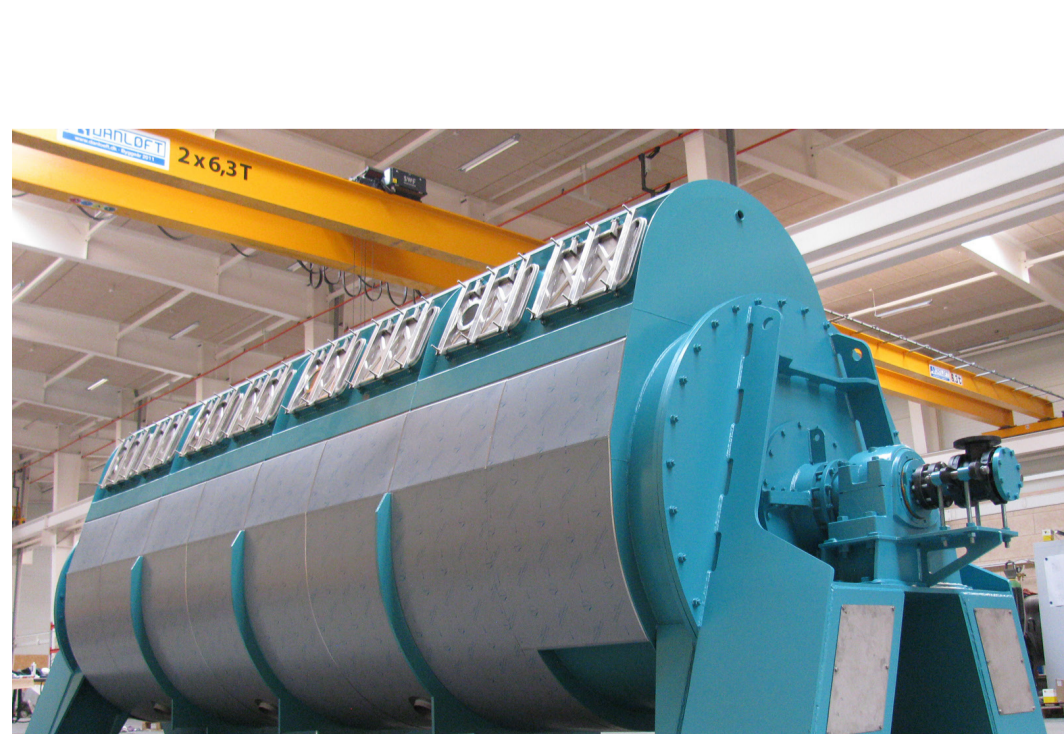

Optimized steam control line with minimized pressure loss.
